Proper Flush Mount Installation
Flush mount your heater in four simple steps

**STEP 1** Frame the pocket that will house the heater and line with a one hour-rated fire containment box.

**STEP 2** The junction box must be mounted outside of the lined pocket. You can choose to mount the junction box in a variety of locations, depending upon where you’ll be accessing it.

**STEP 3** Install the frame into the finished pocket. You may choose to leave all four inches of the trim exposed, or cover it with a decorative ceiling ([1/2” clearance is required from ventilation holes]).

**STEP 4** Install the heater [heater must face horizontal to the floor] and adjust the tabs to set the heater height appropriately.

**WARNING:** Frame and heaters cannot be mounted on a sloped/pitched ceiling. Frame is only to be used on a flat, non-sloped ceiling. Flush mount applications must always be installed with heaters horizontal to the floor.
